Allowance of Application # 09/774,924

1. The following communication is in response to applicant's Amendment, received 17-June-2004.

Reasons for Allowance

2. The following is an Examiner's Statement of Reasons for the indication of allowable subject matter. The instant application is directed to a non-obvious improvement over the invention described in U.S. Patent No. 5,636,424 to Singer et al.. The improvement comprises a safety restraint design controller for controlling the design of a safety restraint system so that a predetermined desired level of an occupant's response is produced, wherein the invention uses a design of experiments involving a plurality of restraint factors as well as occupant responses to set initial values of the occupant restraint factor response model, the restraint factors including values of deployable components within the vehicle. This patentable distinction is included in each of the independent claims, nos. 1, 9, 15 and 18. The art of record, either individually or in combination, fails to teach, suggest, or render obvious the useful, concrete and tangible < safety restraint design controller for controlling the design of a safety restraint system > having the corresponding structure which is disclosed in the specification and equivalents thereof (at least at <page 8, line 24 through page 17, line 16, and Figures 1-9>). In view of the foregoing, the claims of the present application are found to be patentable over the prior art.
